## Optimise Iron for Plant Availability

### Are You Using the Right Iron?

#### Ultrasol<sup>®</sup> micro FeD12 (Fe DTPA chelate)

Ultrasol<sup>®</sup> micro FeD12 is an iron chelate applied for reliable nutrient delivery.

Effective in hydroponics, growth media, and soils up to pH 7.5, where iron uptake is limited.

#### Why use it?

- ✓ **High iron (Fe):** water-soluble content, typically 11.6% or higher
- ✓ **More stable than Fe EDTA products when:**
  - mixing with calcium nitrate in tank concentrates
  - growth medium is up to pH 7.5
- ✓ **Compatible:** with most fertilisers and EDTA chelates of Cu, Mn & Zn
- ✓ **Pack-size:** 15 kg resealable pail to protect product from the elements
